

# CYBER SECURITY AWARENESS IN 10 EASY STEPS

Source: [www.cybersecurity.my](http://www.cybersecurity.my)

- 01 MAKE YOUR PASSWORD COMPLEX**  
Use unique passwords, don't tell anyone your passwords, and switch them up frequently.
- 02 UPDATE YOUR SECURITY SOFTWARE**  
Improve computers with the most recent security software (such as anti-virus and anti-spyware).
- 03 HAVE BACKUP STORAGE**  
Avoid publishing official documents online. If you go offline, having a backup storage of your files will come in handy.
- 04 DON'T BE DUPED BY SPAM**  
Be wary of content from questionable websites, blogs, or e-mails. Messages from people you don't know might be clickbait for a hacker.
- 05 BE SENSITIVE AND ON GUARD**  
Avoid leaving traces and engage in far usage on private social media accounts. Do not provoke anybody or respond responsibly when you are provoked.
- 06 BE ON THE LOOKOUT**  
Allow no one else to use your email or social media account IDs or passwords. Be cautious while visiting blogs and websites that promote terrorism, slander, provocation, and obscenity.
- 07 SCAN FOR MALWARE REGULARLY**  
To prevent a malware infection from attacking your email, install a malware scanner.
- 08 WHEN IN TROUBLE, ACT QUICKLY**  
Report any loss of government ICT assets (such as storage devices, laptops, and computers) immediately.
- 09 READ UP ON CASE STUDIES**  
Recognise the most recent developments in cyber-threats. Consider the consequences of Internet misuse, and be attentive to them.
- 10 DON'T USE THE INTERNET ILLEGALLY**  
Understand and adhere to the government set cyber security rules, guidelines, regulations, and circulars.
